

## Mobile Pump (MP)

Model: MP100

The MP100 is the mobile pump in Femco's product range. This oil pump has an operating capacity of 100 litres per minute and is equipped with a Femco® oil drain plug on each side. When the pump is not in use these plugs are sealed and prevent oil from leaking out of the pump. When the oil pump is in use the Femco® plugs allow you to quickly and easily connect the hose between your equipment on one side and your oil storage on the other.

The oil pump **MP100** is easy to transport and easy to set up. The Femco® oil drain plugs and quick connect drainers will prevent oil from being spilled. The MP100 is available as a 220v unit or air pump operated, depending on what facilities you have available on site. Hoses are available in any required length.

The oil pump **MP100** can be operated within the storage box to protect it from dirt, rain and other contamination. After experiencing the MP100 as a time saving solution for your oil drainage you will be able to easily integrate the MP100 into a MSU250M system to take the process to the next level.
